Total appointments per day

Description

Description:

This function visualize the total appointments in each day of the existing teacher.

- a)Actor:Teacher
- b)Pre-condition: a)The teacher must assigned in course.  
b)The teacher must register a least one appointment in a day.
- c)Post-Condition: a)The data retrieved form the database and then visualized on the progress bar.
- d)Alternative Flow:
- 1)There are no appointments in the teacher scheduler to be visualized.
- 2)There are no enrolled students in the course =>so it will cause an error.
